Location: Toronto, ON | **Availability:** Winter 2027

Education

Toronto Metropolitan University — Toronto, ON

Bachelor of Engineering, Aerospace (Aircraft Stream) – 3rd Year — *Sept 2023 – Expected May 2028*

- Relevant Coursework: Manufacturing Processes, Engineering Economics, Aerospace Structural Design, Component Design & Selection, Operations & Quality.

Technical Skills

Planning & Reporting: MS Project, Advanced Excel (VLOOKUP, PivotTables, macros), Power BI, production scheduling, performance reporting, BOM tracking.
Industrial Engineering: Cycle time analysis, production rate & efficiency monitoring, delay-hour tracking, supply chain & detailed planning, continuous improvement, root-cause analysis, process documentation.
Cross-Functional: Production, logistics & procurement, methods, quality, stakeholder coordination.
CAD & Simulation: SolidWorks, CATIA V5, Fusion 360, ANSYS (Static Structural), Engineering Drawings, GD&T.
Programming: MATLAB, Python.

Experience

Mechanical and Equipment Technician Co-op — May 2026 – Present

Athletic Knit — *Toronto, ON*

- Reduced manufacturing lead times to under 1 week by building an end-to-end production tracking system monitoring the final assembly line from order intake through shipment.
- Improved production rate and cut delay hours ∼15% by analyzing workstation cycle times and identifying bottlenecks across **semi-autonomous laser cutting** lines.
- Maintained performance reports on efficiency and throughput by consolidating workstation data into **Excel** trackers reviewed with production leads.
- Cut per-unit handling time by designing a custom conveyor fabric-retention hook in **SolidWorks** that eliminated material folding on intake.

Project Manager – Chassis, Track & Aeroshell — Jan 2026 – Present

TMU Hyperloop Team — *Toronto, ON*

- Led design and manufacturing across 3 subsystems (chassis, track, aeroshell), owning the full research-design-manufacture cycle and coordinating structures-to-manufacturing handoffs.
- Kept the build on schedule against a fixed competition date by sequencing fabrication and tracking deliverables across the sub-team.
- Validated track and chassis structures with **static structural FEA** in ANSYS, confirming a 4.5x safety factor against yield and documenting results in review-ready reports.

Engineering Project Lead — Sept 2024 – Dec 2025

Metropolitan Aerospace Rocketry Society (MARS) — *Toronto, ON*

- Prevented build-milestone slips by maintaining the master project schedule in **MS Project** and tracking 30+ deliverables across engineering, supply chain, and quality.
- Cut part-shortage delays by leading an improvement project that reworked the team's procurement and logistics workflow for tracking parts from order to delivery.
- Delivered a **competition rocket** on schedule by leading a 10+ member sub-team through design, procurement, and fabrication and coordinating cross-functional handoffs.

Student Advisor – Faculty of Engineering and Architectural Sciences — May 2025 – Present

Toronto Metropolitan University – Residences — *Toronto, ON*

- Replaced manual reporting for **200+ students** by building **Power BI** dashboards and Excel performance trackers that surfaced issues earlier.

Projects & Competitions

SAE Aero Design – RC Aircraft Wing — 2025

Toronto Metropolitan University SAE Team — *Toronto, ON*

- Designed the competition RC aircraft wing (spar/rib layout) in **SolidWorks** against SAE payload and span constraints, then supported airframe fabrication through to competition flight.

Engineering Case Competitions – 1st Place (x2) — October 2025

CATIA V5 Competition & CASI TMU Case Competition — *Toronto, ON*

- Won 2 first-place finishes by modeling a multi-part assembly in **CATIA V5** under a timed constraint and presenting a scoped design solution to a panel of industry judges.
